RO antiscalant BimuroPro HSI

Suitable for high silicon water quality

Technical Date Sheet

Product Description

BimonoPro HSI is particularly suitable for water quality containing silicon, such as semiconductor reclaimed water reuse.

BimonoPro HSI is applicable to reverse osmosis CA membrane and TFC membrane, nanofiltration membrane and ultrafiltration membrane.

Disperse blocking particles to maintain a clean reverse osmosis membrane surface.

No adverse effects on the environment, especially suitable for the district where has special requirements on wastewater discharge.

Specification

Parameter	Specification
Appearance	Colorless liquid
Specific gravity	1.1-1.2 g/cm ³
pH(5% water solution)	6-9
Odor	Odorless

Adding and controlling

BimuroPro HSI should be continuously added to the last level security filter. This product should be injected into the water supply pipe by diluting water tank or packing barrel. The operation parameters of the specific dosing ratio depends on the water quality and membrane system.You can ask dosing software or technical personnel determined.

Storage

Sealed and avoid leak,stored in a cool,dry and ventilated area.

Document provided

TDS,COA,MSDS,B/L,Packing list.

Delivery information

Packing:25kg Plastic Bag.
